

EPOXIES IN MARINE APPLICATIONS

01

Protection

Epoxy resins are crucial in safeguarding marine structures like ships' hull & decks from corrosion. Epoxy based primer coatings form a robust defence against seawater and the harsh conditions of marine environments, preserving the integrity of boat and ship structures and extending their service life.

02

Adhesion

Epoxies achieve superior adhesion even under wet conditions. This capability assures that structural bonds remain secure & effective.

03

Versatility

Epoxies adhere well to a variety of materials especially those used in marine construction. This versatility makes them indispensable for multiple repairs in marine settings.

04

Affordability

Epoxy-based coatings support international trade by helping with the building and maintenance of long-lasting vessels. This translates into lower costs for consumers and a lower impact on the environment. Smooth sailing all the way from production to end of life is guaranteed.
